

What is EPA Certification Section 608?

More and more businesses are requiring an EPA Certification to qualify for their positions. Having the certification is also a federal requirement. Those who go through the EPA process gain a better awareness of the many laws and rules that come with handling HVAC chemicals.

The **EPA Section 608 Technician Certification** is the only section that has different types to choose from. You will need this certification to be able to work on building air conditioning and refrigeration systems.

Our Trainer

Nancy Imhoof is highly skilled in all aspects of heating, air conditioning installation & service, boilers & on-demand water heaters, and generators. She has been actively supporting Supply New England's customer base since July 2009 by assisting our rapidly growing air conditioning & generator business, as well as boiler support.

Training Topics:

- Ozone Depletion
- The Clean Air Act and Montreal Protocol
